PDF version: Update: Update command may be used to update a document, but please note that this is different from a command to rerun a graphics driver. It is better to update the driver once the graphics are stable than to force a graphics rerun during a driver update. Update is similar to Scan 3, in that it will restore the document to the latest known revision. This should be useful if you try a driver update on a computer that was previously running the document, and you wish to return the document to the last known acceptable revision. Update: You may need to use the Retrieve Missing Items document, per the Command Reference. Windows cannot perform a recover because it does not know where the missing.page files are located, or where you saved the document to. This only works with.original and.scan files, which are scanned to another file location. If you can find the.page files, then you should be able to extract the contents from the.page files, then redirect the document using the Copy command. To find your.page files, use the following query in the Find box: Search for *.page To extract the contents, use the following query in the Find box: Search for *.text Use the Copy command to redirect the document. . This will work for any document type that supports.text files, and any of the following locations: Documents/{YourUserName}/{YourUserName} Documents/{YourUserName} "My Documents" More details on the Copy command can be found in the Command Reference. A: Find it! Start the command window (Win button + Shift + ↑), then browse to Documents & Settings\All Users\Application Data\Microsoft\Office\16.0\Word\Document.vbe and copy the file to another location. Download a copy of Microsoft Office for the past several years from OfficeSource and save it somewhere on your harddrive. Open the 16.0 folder, in the file list in the left pane, expand the Documents, Documents.zip folder and the Documents.zip.ini Remove any reference to
